Are you searching for new business opportunities in meteorology and oceanography? If so, we have a uniquely Canadian solution for you.

The Canadian Meteorological and Oceanographic Society (CMOS) has developed a directory of businesses that provide a listing of meteorological and oceanographic services in Canada. This directory, which is located in the Private Sector link at www.cmos.ca, gives private sector companies the opportunity to advertise their capabilities. More importantly, Environment Canada's Meteorological Service of Canada (MSC) uses this directory as a referral list for customers who call looking for commercial services. In addition, MSC is using the web page listing as a basis for consultation with the private sector. Fisheries and Oceans Canada (DFO) plans to provide a similar referral service by the fall of 2003.

You or your company have/has been identified as a supplier of meteorological and/or oceanographic services as defined in the areas of specialization listed on the application form enclosed. We hope you will find this service an attractive opportunity.

What are the features/benefits of the web page directory?

- A searchable database of company names, areas of specialization, contact information and email addresses.
- A short description of your company's capabilities.
- A link to your own company web page.
- MSC and DFO referrals to web page listing
- Frequent updates
- Ongoing maintenance
- Promotion of the directory to Canadian industries that use metocean services through press releases and direct mailings.
- News from and consultation with the CMOS Private Sector Committee

How do we subscribe?

Please contact Susan Woodbury, Co-Chair of the CMOS Private Sector Committee at psc@cmos.ca or (902) 404-3933. I would be pleased to send the letter and application form to you electronically.

The CMOS Private Sector Committee, which is comprised of metocean industry representatives from across Canada and representatives from MSC, has been working hard to develop this unique service for you. For further information about the work of this committee, please take a look at our publication, "A Meteorological Industry Strategy for Canada" at <http://www.cmos.ca/PrivateSector/publicationse.html>

Yours sincerely,

Susan Woodbury
Chair, CMOS Private Sector Committee
